With the sealed design and certified with the industry standard Ingress Protection (IP) Rating, IP54, the Focus can be used in high particulate and wet weather conditions.

COMPACT AND PORTABLE

The Focus Laser Scanners measure at 230 x 183 x 103mm and weigh at 4.2kg making them the smallest and most light weight scanners in the market. The devices are equipped with a waterproof transport and ergonomic carrying case for maximum portability.

LASER SCANNERS FOR SHORT, MEDIUM AND LONG RANGE APPLICATIONS

FARO Focus Laser Scanners are specifically designed for both indoor and outdoor measurements in industries such as Architecture, Engineering, Construction, Public Safety and Forensics or Product Design. All devices capture real world information into the digital world to deliver information used to analyze, collaborate and execute better decisions to improve and maintain the overall project and product quality. All Focus^S and Focus^M scanners are equipped with recognizable features, such as Ingress Protection (IP) Rating, extended temperature range, HDR functionality, all in an ultra portable size.

The Laser Scanner Focus^S Series offers more advanced functionality in addition. Besides an increased distance and angular accuracy all Focus^S scanners are equipped with an internal accessory bay and an on-site compensation function quality verification. When utilized with SCENE Software, the Focus^S supports real time, on-site registration which enables 3D scan data to be wirelessly transmitted, processed, aligned and registered directly to an on-site mobile device/PC in real time.

1 For a Lambertian scatterer. **2** Ranging noise is defined as a standard deviation of values about the best-fit plane for measurement speed of 122,000 points/sec. **3** A noise-reduction algorithm may be activated by averaging raw data. **4** Ranging error

is defined as a systematic measurement error at around 10m and 25m. **5** On-site compensation required. **6** For distances larger 25m add 0.1mm/m of uncertainty. **7** 2x150°, homogenous point spacing is not guaranteed. **8** Ferromagnetic objects can disturb the earth magnetic field and lead to inaccurate measurements. **9** Low temperature operation: scanner has to be powered on while internal temperature is at or above 15°C, high temperature operation: additional accessory required, further information on request | All accuracy specifications are one sigma, after warm-up and within operating temperature range; unless otherwise noted.
